THERMODYNAMICS OF SURFACES AND INTERFACES

THERMODYNAMICS OF SURFACES AND INTERFACES 1 Introduction Everything has to end somewhere For solids, or liquids that "somewhere" is a surface, or an interface between phases For liquids, the interface is between the liquid and a vapor phase or between two immiscible liquids For solids, the interface can be between the solid and

Figure 35-1: Including the effect of interfaces and surfaces The treatment of equilibrium up until now treated these two systems as being alike even though one obviously has much more surface (and thus any energy associated with that surface) than the other Consider, as an example, that an atom on a surface as having a 50% higher energy than
